## Dr. Ron Castellucci

*The confidence of knowing*

### CREDENTIALS

- **Doctor of Chiropractic**  
Logan College, 1988
- **Professor** — Sherman College of Chiropractic
- **27+ Years** in Chiropractic Education
- Founder, **Castellucci Pediatric Seminars**

### HAS LECTURED AT

- Sherman, Life, Northwestern, Logan & most U.S. chiropractic colleges
- **Internationally:** Vancouver · London · Barcelona · Stockholm · Mexico City · Lima · Santiago

### AUDIENCES SERVED

- Practicing Doctors of Chiropractic
- Chiropractic Students & Interns
- International Audiences

### ABOUT THE SPEAKER

## Bridging Knowledge, Skill & Clinical Excellence

Dr. Ron Castellucci has spent more than two decades helping practicing DCs develop the palpation skills, clinical frameworks, and adjusting precision that define truly exceptional pediatric care. As a **Professor at Sherman College of Chiropractic** and founder of **Castellucci Pediatric Seminars**, he teaches a distinctive analysis and adjusting system rooted in the natural biomechanics of the child's spine — including his own **Touchpoint Scan**, an elegant spinal analysis tool developed specifically for pediatric practice. His seminars have reached DCs across the U.S. and on five continents.

### SIGNATURE PRESENTATION TOPICS

#### 01 Developmental Neurology & the Pediatric Spine

The developing nervous system is shaped by every sensory input, postural challenge, and movement pattern a child encounters. This seminar examines how spinal dysfunction disrupts communication pathways essential to neurological maturation — including autonomic regulation, primitive reflex integration, and why some children remain locked in chronic sympathetic overdrive. Practitioners leave with a clinical framework for supporting optimal neurological development from infancy through adolescence.

#### 02 Caring for the Newborn: The Art of Being Exceptional

When confidence and skill unite, the art of chiropractic becomes truly exceptional. This hands-on immersion in spinal analysis and adjusting for the newborn, infant, and toddler develops the tactile precision and clinical judgment required to care for your youngest patients with certainty. Features the TouchPoints system — advanced paraspinal muscle palpation adapted specifically for infant patients — alongside Gonstead, Diversified, and Logan Basic techniques.

#### 03 Muscle Palpation Analysis & Specific Adjusting

What if your hands could tell you exactly where the subluxation is — before you ever took an x-ray? This course teaches a tonal, muscle-based approach to spinal analysis — reading the intrinsic paraspinal and pelvic musculature as a real-time map of vertebral subluxation. Grounded in muscle physiology and mechanoreceptor function, and paired with gentle, specific adjusting techniques, this course transforms how practitioners feel, think about, and correct the subluxated spine.

#### 04 Advanced Spinal Assessment & Adjusting for Infants and Children

Designed for DCs committed to moving beyond the basics — into the mastery that sets truly exceptional pediatric practitioners apart. This 12-hour **ICPA** certification module covers full spine analysis and adjusting from Gonstead, Diversified, and Logan Basic frameworks alongside Touchpoints muscle palpation, motion palpation, visual analysis, and child drop headpiece techniques. Extensive hands-on application throughout. Not just skills — but the confidence to apply them with precision and purpose.

“Dr. Castellucci has a rare ability to connect neurological science, clinical precision, and chiropractic philosophy in a way that genuinely changes how DCs think — and how they adjust.”

— INTERNATIONAL CE ATTENDEE

Dr. Ron was fantastic. I was a student of his while I was at Sherman College and he's an even better teacher than I remember. Everything we learned over this course will improve my ability and skill in caring for newborns and infants.
